# 01 | EXECUTIVE SUMMARY

Global Line LTD is an Afghanistan-based technology and ICT solutions company established in 2016. Its established service areas include IT infrastructure, networking, communications, hardware and software solutions, office automation, and technical support.

Building on these foundations, Global Line is positioning its portfolio toward a broader technology-partner model—connecting dependable ICT infrastructure with cybersecurity, cloud, artificial intelligence, business automation, digital transformation, and startup innovation.

Our focus is to help organizations make informed technology decisions, strengthen their digital foundations, improve operational efficiency, and prepare for evolving business and technology needs.

## CORPORATE POSITIONING

### FROM ICT FOUNDATIONS TO DIGITAL GROWTH

A customer-focused technology partner combining established infrastructure services with emerging digital capabilities.

## 02 | VISION, MISSION & VALUES

| VISION                                                                                                                                                                 | MISSION                                                                                                                                                                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To become a trusted and innovative technology company in Afghanistan and the region, recognized for reliable ICT infrastructure and forward-looking digital solutions. | To help organizations select, implement, integrate and manage appropriate technologies that support efficiency, security, productivity and sustainable digital development. |

### CORE VALUES

|                                                                                  |                                                                                          |
|----------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|
| <b>Professionalism</b><br>High standards in communication, delivery and support. | <b>Integrity</b><br>Transparency, accountability and responsible business practices.     |
| <b>Customer Focus</b><br>Solutions shaped around actual needs and objectives.    | <b>Reliability</b><br>Stable, secure and maintainable technology environments.           |
| <b>Innovation</b><br>Exploring useful technologies and new approaches.           | <b>Continuous Learning</b><br>Developing knowledge and capability as technology evolves. |

## 03 | CORE TECHNOLOGY PORTFOLIO

Global Line's established ICT service areas provide the foundation for dependable day-to-day business operations.

### IT INFRASTRUCTURE & NETWORKING

LAN, WAN and wireless networks; network design and implementation; structured cabling; fiber optic; enterprise connectivity; VPN; network management and support.

### SERVERS & DATA CENTER

Server infrastructure; file and web servers; Internet gateways; messaging infrastructure; Microsoft and Linux environments; maintenance and business continuity.

### COMMUNICATIONS & COLLABORATION

Internet connectivity; wireless solutions; IP telephony; IP-PBX; business communications; email infrastructure and collaboration technologies.

### HARDWARE & SOFTWARE

Servers, desktops, laptops, networking equipment, storage, printers, software, security equipment and IT accessories.

### OFFICE AUTOMATION

Printing, copying, scanning, digital office technologies and integrated workplace solutions.

### TECHNICAL SUPPORT

Hardware and software support, troubleshooting, maintenance, system administration and outsourced IT support.

## SERVICE PRINCIPLE

Understand the requirement • Design the solution • Implement responsibly • Support the environment

## 04 | DIGITAL & EMERGING TECHNOLOGIES

The following areas represent Global Line's strategic portfolio direction. Specific delivery scope, partner availability and project experience should be confirmed for each engagement.

### ARTIFICIAL INTELLIGENCE

AI assistants; document processing; AI-powered search; customer support automation; data analysis; generative AI; predictive analytics; integration of AI into business applications.

### CYBERSECURITY

Network and endpoint security; firewall solutions; access control; secure architecture; security monitoring; assessment; data protection; backup and recovery.

### CLOUD & MODERN IT

Cloud strategy; migration planning; hybrid environments; cloud security; cloud applications; backup and disaster recovery; infrastructure modernization.

### DIGITAL TRANSFORMATION

Process digitization; workflow optimization; system integration; digital workplace; data management; AI-assisted processes and technology modernization.

### SOFTWARE & APPLICATIONS

Business applications; web solutions; databases; web hosting; web design; application integration and customized technology solutions.

### BUSINESS AUTOMATION & IOT

Repetitive-process automation; connected devices; smart-office concepts; intelligent monitoring and technology-enabled workflows.

# 05 | STARTUP & INNOVATION

Global Line’s Startup & Innovation direction is intended to support technology-based ideas and growing businesses with the infrastructure, planning and technical guidance needed to move toward implementation.

|                                                                                                                                    |                                                                                                                                |

## 06 | DELIVERY MODEL & VALUE

|           |                  |                                                                         |
|-----------|------------------|-------------------------------------------------------------------------|
| <b>01</b> | <b>DISCOVER</b>  | Clarify objectives, environment, constraints and success criteria.      |
| <b>02</b> | <b>DESIGN</b>    | Recommend an appropriate architecture and implementation approach.      |
| <b>03</b> | <b>IMPLEMENT</b> | Configure, deploy and integrate agreed solutions.                       |
| <b>04</b> | <b>SECURE</b>    | Consider security, access and continuity requirements.                  |
| <b>05</b> | <b>SUPPORT</b>   | Provide agreed maintenance, technical support and knowledge transfer.   |
| <b>06</b> | <b>OPTIMIZE</b>  | Identify improvements, automation and future development opportunities. |

### WHY GLOBAL LINE

Established since 2016 — Experience in ICT infrastructure and business technology solutions.

Broad technology perspective — A portfolio spanning infrastructure, communications and emerging digital areas.

Customer-oriented — Solutions reflect the customer's environment and objectives.

Practical approach — Emphasis on implementation, support, compatibility and long-term use.

Local context — Understanding of operating conditions and technology needs in Afghanistan.

# 07 | TECHNOLOGY ECOSYSTEM & ROADMAP

Global Line LTD holds valid authorization and reseller documentation for the technology brands listed below.

|        |            |           |        |
|--------|------------|-----------|--------|
| Cisco  | Dell       | HP        | Lenovo |
| Sophos | SolarWinds | Microsoft | Others |

Cisco Authorized Partner — Nine-Year Partnership (Historical)

Cisco • Dell • Sophos • Lenovo • SolarWinds • HP • Kaspersky — Authorized Reseller

## STRATEGIC ROADMAP

|                 |                        |            |                 |
|-----------------|------------------------|------------|-----------------|
| ICT Foundations | Security               | Cloud      | AI              |
| Automation      | Digital Transformation | Innovation | Startup Support |

Quality, security, compliance, service levels and project deliverables should be defined for each engagement according to the client’s requirements and applicable contract.
